FOCUS ON DATA FLOWS

Country visit of the European Environment Agency (EEA) to Italy - The Eionet network in Italy (10/10/2024)

Alessandro Lotti – Eionet National Data Flow Coordinator (NDFC)
ISPRA (Italian Institute for Environmental Protection and Research)

NDFC - National Data Flow Coordinator

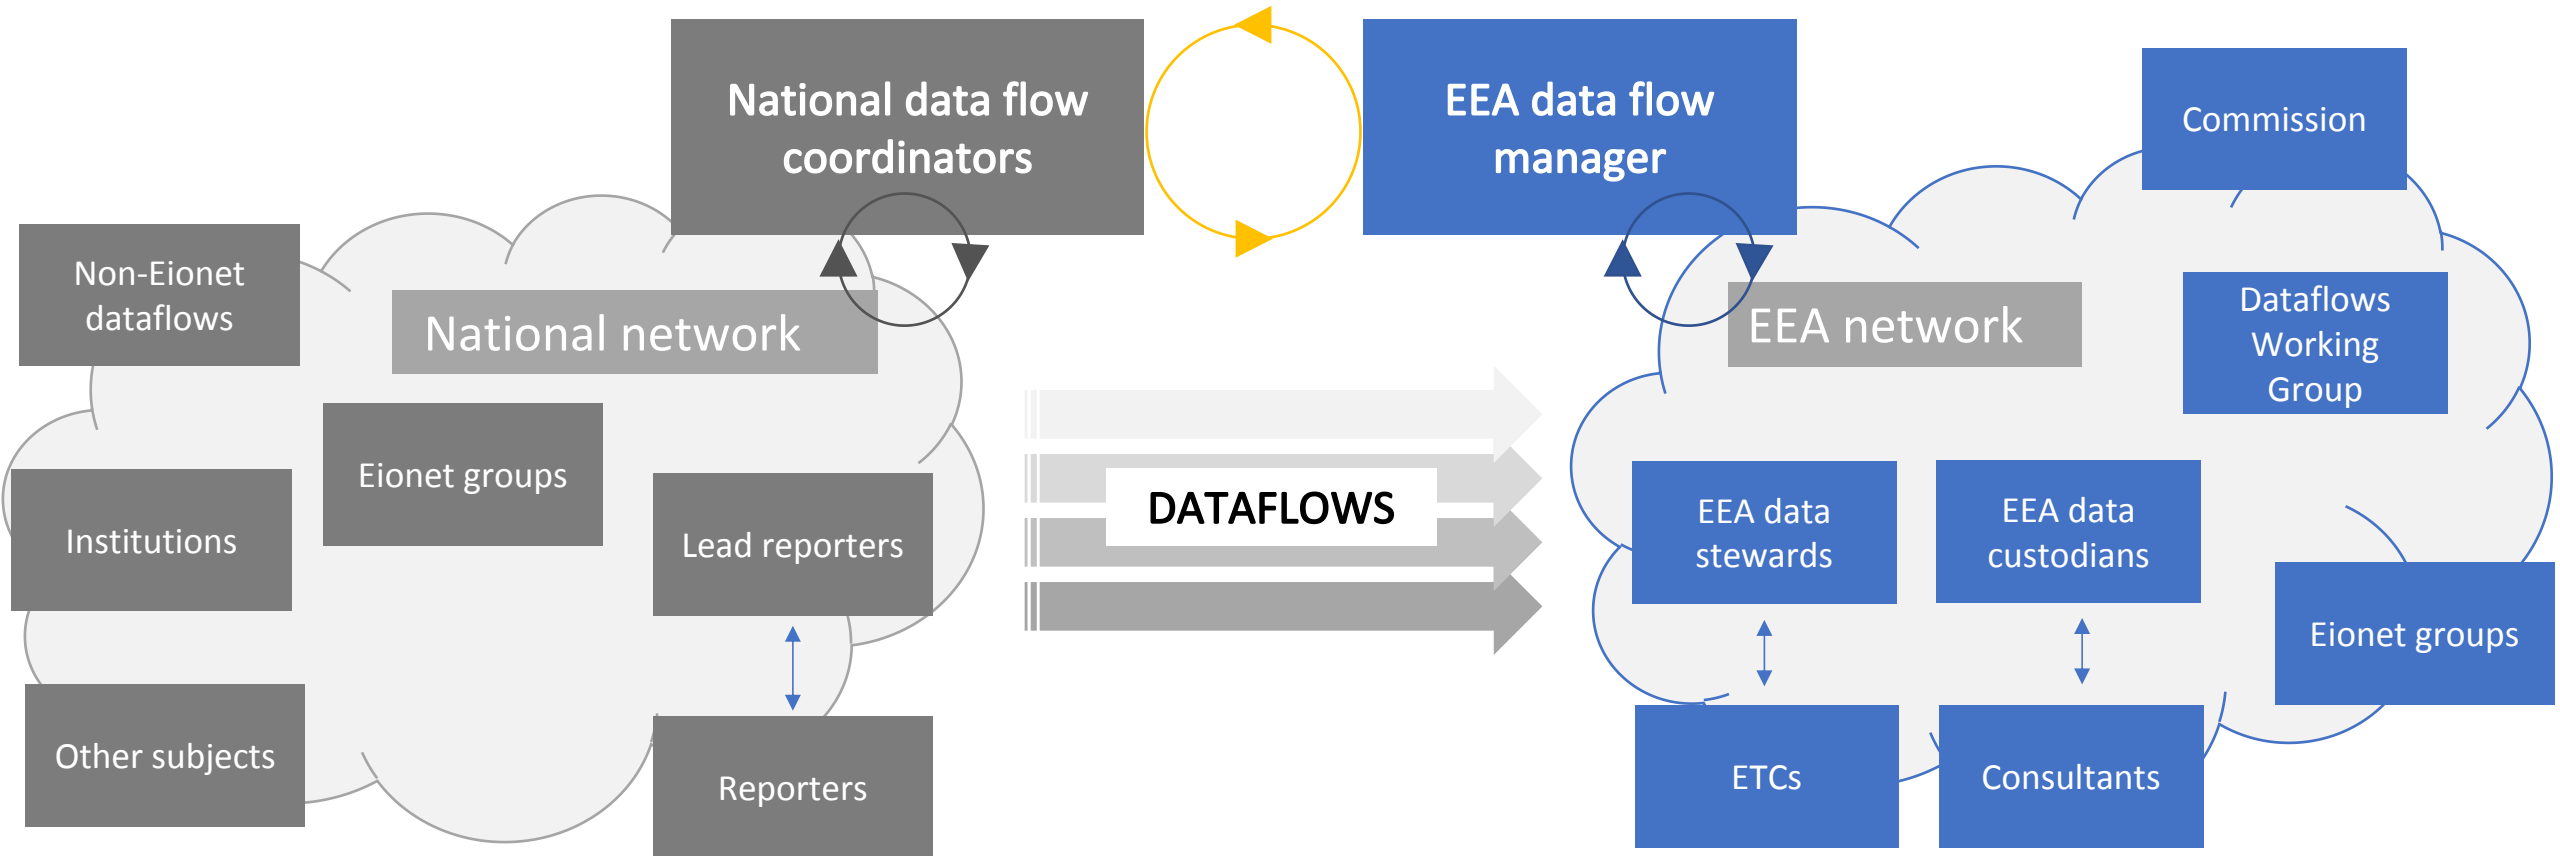

Functions:

- In line with Art.4 of the EEA-Eionet Regulation, the overall aim of the National Dataflow Coordination Function (NDFC) is to ensure a coherent and coordinated overview of collecting, collating and sharing data between the country and the EEA to respond efficiently to the needs of the agency's work programme.

Tasks:

- Keep national overview of timeline of dataflows recorded in ROD and handled through Reportnet to monitor the timely delivery
- Keep national overview of assigned reporters through Reportnet, and be responsible for assignment of reporters to dataflows where needed (dependent upon each dataflow reporter assignment process)
- Coordinate country consultation of the annual evaluation of the Eionet Core Dataflows and offer feedback on evaluation score at annual meeting.
- Ensure business continuity and help onboard new reporters, having a clear view of the general skills and practices that are needed to report to EEA
- Contribute to the building of data sharing capacities at national level.

Data flow

SINA - Italian Environmental Information System

ISPRA is responsible for building and managing The National Environmental Information System (SINA) (Law 132/2016 established SNPA)

SINA with the **Regional Focal Points (PFR)** and the **Regional Environmental Information Systems (SIRA)** are the network called **SINANET**

The **National Environmental Information System (SINA)** is responsible for:

- Collecting, processing and dissemination of environmental and territorial data and information
- Official data for Public Administrations

MDIAR model: Monitoring, collection and organization of environmental data and information (also through the development of indicators), environmental analysis and reporting or the structured publication of environmental data, information and assessments.

SISTAN - National Statistical System

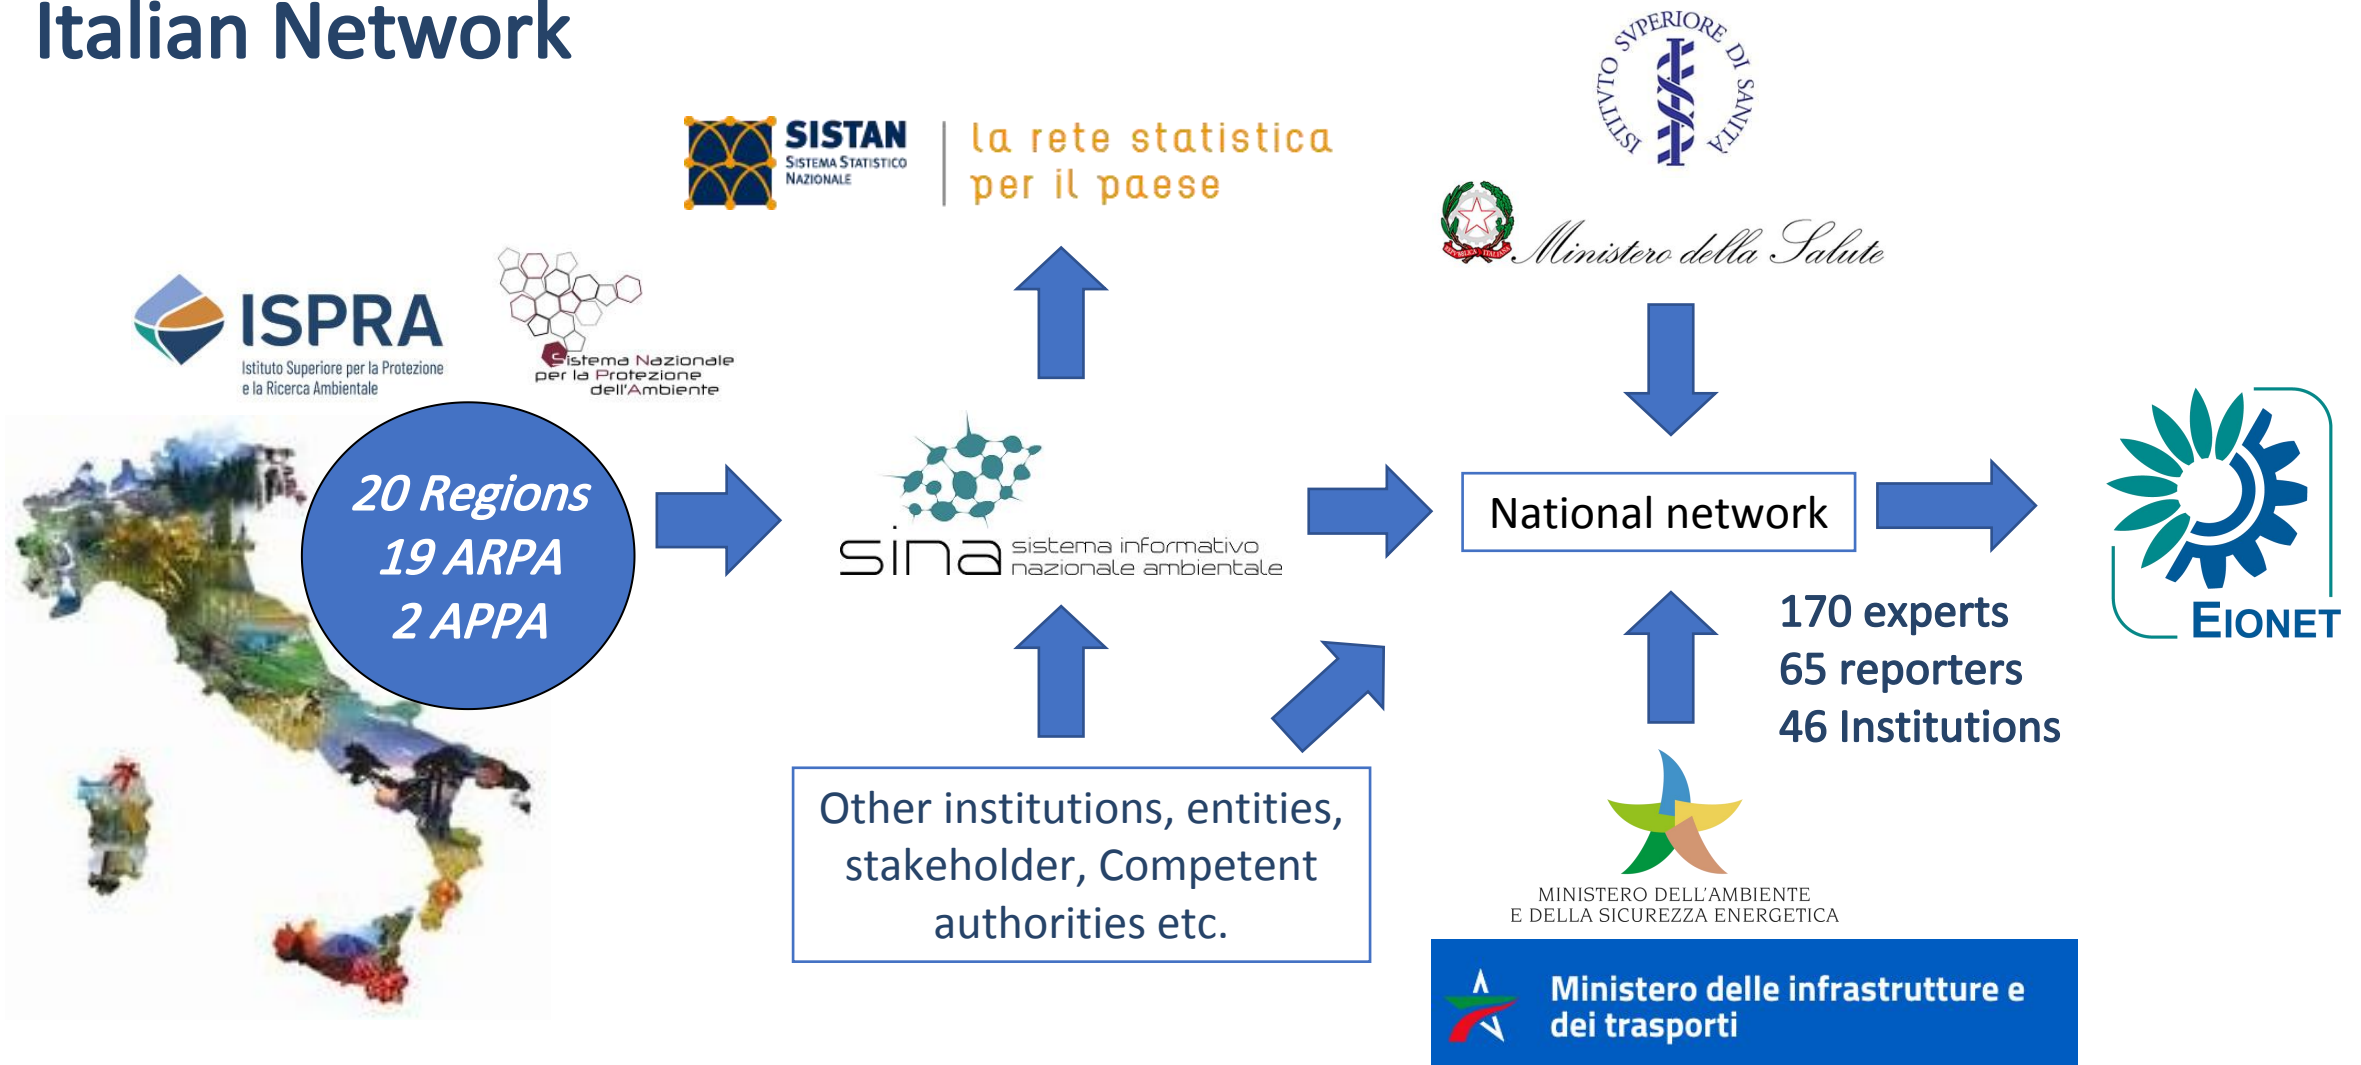

- ISPRA is part of the **National Statistical System (SISTAN)**
- The National Statistical System (SISTAN) is the network of public entities that provides official statistical information in Italy.
- ISTAT and ISPRA are responsible for about 80% of official statistical environmental data
- ISPRA and ISTAT, within respective roles and for different purposes, carry out data production, statistical research and studies in the environmental field to support decisions for national and international public policies.

675	Air Quality Directive IPR	(E2a) Information on primary up-to-date assessment data - measurements (Article 10)	Continuous	

Reporting issues for Italy

Complexity of the Network: There are many institutions (Ministries, local authorities, municipalities, entities, etc.) at both the national and local levels that contribute to the reporting process.

Reporting Timelines: Reporting deadlines and monitoring activities are too close for some data flows (not enough time for validation of data); wide amount of data to collect; development of new portals and environmental information systems for more efficient data monitoring and collection process; deadlines scheduled in the middle of the Christmas break.

Communication Gaps: Lack of communication regarding changes in the reporters' nomination.

Mismatch Between Thematic Groups (TGs) and Reporters: There are communication gaps and misalignments between reporters and thematic groups, as some reporters are not included in the MS Teams channels.

Comparison with other countries

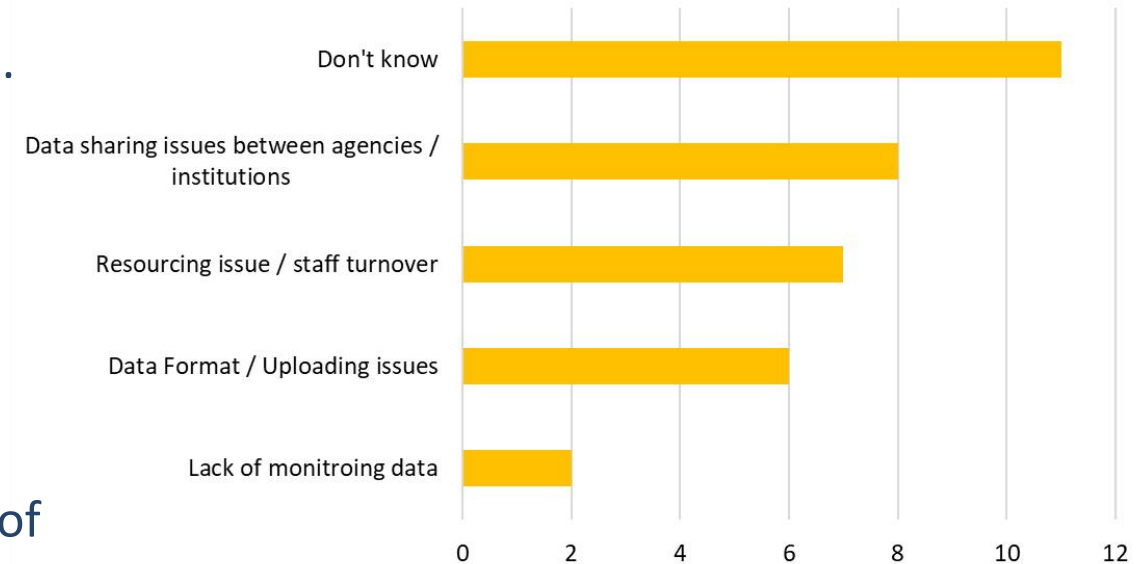

What causes delays and/or quality issues?

Aside from 'Don't know', four general categories were identified as the cause of problems:

- Data sharing issues between agencies/institutions.
- Resourcing issues / staff turnover
- Data format / Uploading issues
- Lack of monitoring data

'Don't know' is also interesting:

- Difficult to address issues without knowing cause of the problem.
- Remember EEA can provide specific feedback on quality issues.

Source: A cross-European analysis of Core Data Flows results by Swedish EPA - NDFC meeting 09/06/2022

Comparison with other countries

- The NDFC role has yet to be fully and effectively established in many countries, as demonstrated either by the lack of a response or by the lack of insight concerning failed reporting.
- Some reporters expressed frustration with uploading issues and difficulty contacting the EEA helpdesk.
 - With quick help and clear blocker feedback reporting would be achieved on-time more regularly.
- ‘Data sharing issues at the national level’ was the most commonly identified reason for losing points.
- Successful reporting is often vulnerable and appears dependent on individual expertise as demonstrated by the extreme impact of staff turnover on scores.

Dataflows transitioning to Reportnet 3

Reportnet Login

The next generation for e-Reporting environmental and climate data

Reportnet 3 is the new e-Reporting platform for reporting environmental and climate data to the European Environment Agency (EEA). The platform embraces the strategic goals of the European Commission's Green Deal and Digital Strategy and hosts reporting tasks on behalf of EEA and the Commission.

The transition of reporting obligations from Reportnet 2 to Reportnet 3 will take a number of years. Therefore, Reportnet 2 will remain operational until all data flows are migrated and will then become an archive. Reportnet 2 can be accessed here: <http://cdr.eionet.europa.eu/>

Dataflows transitioning to Reportnet 3

Reporting in 2024

- WISE-1, WISE-2, WISE-3, WISE-6
- Drinking Water Directive (revised model)
- Nitrates Directive (EEA taking over from JRC)
- Floods Directive (all obligations for re-submissions)
- Marine Strategy Framework Directive – text reports (art 8,9,10) and geospatial (art 4)
- Corine Land Cover 2024

Reporting in 2025

- Birds Directive - Report on progress and implementation Article 12 (6-yearly)
- Habitats Directive - Report on progress and implementation Article 17 (6-yearly)
- Invasive Alien Species (6-yearly)
- Information on Natura 2000 sites (annual)
- Under consideration: LRTAP and NEC Directive

New dataflows on the radar

Reporting in 2026

- Seveso Directive (industrial accidents)
 - Transitioning from JRC to EEA
- Water Reuse Regulation
 - Dataflow schema ready to be discussed, awaiting DG ENV on reporting timing
- Nature Restoration Law
 - For example National Restoration Plan. To be further defined
